CONTENTS OF VOLUME 13

Number 1, August 1965

Finch, J. T. and Klug, A., The Structure of Viruses of the Papilloma–Polyoma Type. III. Structure of Rabbit Papilloma Virus with an Appendix on the Topography of Contrast in Negative-staining for Electron-microscopy . 1

Valentine, R. C. and Pereira, H. G., Antigens and Structure of the Adenovirus 13

Sherman, F., Taber, H. and Campbell, W., Genetic Determination of Iso-cytochromes *c* in yeast 21

Hewitt, R. and Billen, D., Reorientation of Chromosome Replication after Exposure to Ultraviolet Light of *Escherichia coli* 40

Warshaw, M. M. and Tinoco, I., Jr., Absorption and Optical Rotatory Dispersion of Six Dinucleoside Phosphates 54

Cantor, C. R. and Tinoco, I., Jr., Absorption and Optical Rotatory Dispersion of Seven Trinucleoside Diphosphates 65

Kaiser, A. D. and Inman, R. B., Cohesion and the Biological Activity of Bacteriophage Lambda DNA 78

Aronson, A., Membrane-bound Messenger RNA and Polysomes in Sporulating Bacteria 92

Lark, K. G. and Lark, C., Regulation of Chromosome Replication in *Escherichia coli*: Alternate Replication of Two Chromosomes at Slow Growth Rates . 105

Bockstahler, L. E. and Kaesberg, P., Isolation and Properties of RNA from Bromegrass Mosaic Virus 127

Gersch, N. F. and Jordan, D. O., Interaction of DNA with Aminoacridines 138

Imamoto, F., Morikawa, N., Sato, K., Mishima, S., Nishimura, T. and Matsushiro, A., On the Transcription of the Tryptophan Operon in *Escherichia coli*. II. Production of the Specific Messenger RNA 157

Imamoto, F., Morikawa, N. and Sato, K., On the Transcription of the Tryptophan Operon in *Escherichia coli*. III. Multicistronic Messenger RNA and Polarity for Transcription 169

Huang, C. and Thompson, T. E., Properties of Lipid Bilayer Membranes separating Two Aqueous Phases: Determination of Membrane Thickness . . 183

ASCHAFFENBURG, R., GREEN, D. W. and SIMMONS, R. M., Crystal Forms of β-Lactoglobulin 194

FANGMAN, W. L., NASS, G. and NEIDHARDT, F. C., Immunological and Chemical Studies of Phenylalanyl sRNA Synthetase from *Escherichia coli* . . 202

FRIESEN, J. D., Control of Bacteriophage RNA Synthesis in *Escherichia coli* . 220

GUERRITORE, D., BONACCI, M. L., BRUNORI, M., ANTONINI, E., WYMAN, J. and ROSSI-FANELLI, A., Studies on Chlorocruorin. III. Electron Microscope Observations on *Spirographis* Chlorocruorin 234

BANGHAM, A. D., STANDISH, M. M. and WATKINS, J. C., Diffusion of Univalent Ions across the Lamellae of Swollen Phospholipids 238

BANGHAM, A. D., STANDISH, M. M. and WEISSMANN, G., The Action of Steroids and Streptolysin S on the Permeability of Phospholipid Structures to Cations 253

ENGER, M. D. and KAESBERG, P., Comparative Studies on the Coat Proteins of R17 and M12 Bacteriophages 260

WARING, M. J., Complex Formation between Ethidium Bromide and Nucleic Acids 269

NISHIMURA, S., JONES, D. S., OHTSUKA, E., HAYATSU, H., JACOB, T. M. and KHORANA, H. G., Studies on Polynucleotides. XLVII. The *in vitro* Synthesis of Homopeptides as directed by a Ribopolynucleotide containing a Repeating Trinucleotide Sequence. New Codon Sequences for Lysine, Glutamic Acid and Arginine 283

NISHIMURA, S., JONES, D. S. and KHORANA, H. G., Studies on Polynucleotides. XLVIII. The *in vitro* Synthesis of a Co-polypeptide containing Two Amino Acids in Alternating Sequence dependent upon a DNA-like Polymer containing Two Nucleotides in Alternating Sequence 302

Letter to the Editor—

NOBBS, C. L., The Binding of Ethyl Isocyanide to Sperm Whale Myoglobin 325

NUMBER 2, SEPTEMBER 1965

Index 969

INSTRUCTIONS TO AUTHORS

1. The *Journal of Molecular Biology* will publish papers on the nature, production and replication of biological structure at the molecular level, and its relation to function. Suitable subjects are sub-cellular organization: molecular genetics: structure and replication of viruses: molecular structure of muscle, nerve and other tissues: structure of proteins, nucleic acids, carbohydrates, lipids, etc., and their synthetic analogues, as investigated by X-rays, light absorption and other methods: problems of inter- and intra-molecular energy transfer. The Journal will not as a rule publish papers when the subject matter is outside the fields defined above; however, when the subject matter borders on molecular biology and is of special interest in relation to molecular biology such papers may be published when space permits.

2. The Journal will also publish Letters to the Editor (averaging 1000 words), and occasional review articles dealing with a more restricted or immediately topical field than those in review journals. (The Editor should be consulted in advance by anyone who considers submitting such a review.)

3. Communications will often describe results obtained by specialized techniques (for example, those of X-ray crystallography and of genetics), and it is most important that technical terms should be avoided or be clearly defined; in any event the actual results obtained and their implications should be described in a way which does not demand from the reader specialized knowledge of a particular technique.

Papers should contain the maximum density of information compatible with clarity, and every sentence should be scrutinized to ensure that its presence is essential. Authors should include enough experimental details to enable others to repeat the work (these may be printed in small type). Careful preparation of manuscript will aid prompt publication; carelessness will cause delay.

4. *Submission of Manuscripts.* Manuscripts should be sent to Dr. J. C. Kendrew, Peterhouse, Cambridge, England, or to any member of the Editorial Board. The submission of manuscript will be taken to imply that the material is original, and that no similar paper has been or will be submitted for publication elsewhere.

Papers will normally be published in English. Manuscripts in French or German will also be accepted, though the use of these languages may cause delay in publication.

5. *Copy.* Papers should be typewritten in double spacing *throughout* (including tables, legends and footnotes), on one side of quarto paper, with a margin of 1 inch all round. The position of tables and illustrations should be indicated in the text; tables and legends for illustrations should be typed separately at the end of the manuscript. All pages should be numbered serially and securely fastened together. Two copies of each manuscript should be submitted, together with three copies of the summary (see § 6) and four copies of the abstract (see § 9).

A short running title of not more than 40 characters (including spaces), suitable for page headings, should be indicated if the full title is longer than this.

The name of the laboratory where the work has been done should be indicated on the title page. All typescript (including the references) should be carefully checked for errors.

6. *Summary.* A summary will be printed at the head of all papers (excluding Letters to the Editor); this should generally not exceed 300 words, and should be intelligible to the general reader without reference to the main text. Abbreviations should be avoided. Summaries of papers to be printed in French or German will be in English, and should be longer (up to 1000 words) for the benefit of readers not familiar with these languages.

7. *Conventions.* The conventions used in current issues of the Journal for headings, references, etc., should be followed in preparing manuscripts. References should be listed alphabetically at the end of the paper, and abbreviated according to the *World List of Scientific Periodicals*, except that for periodicals with English names capital initial letters should be used throughout. Citations in the text should read thus: Smith, Brown & Robinson (1957), or (Smith, Brown & Robinson, 1957). When a citation has more than two authors, the names of all of them should be given at the first citation (except for more than five authors), and on subsequent citations thus: (Smith *et al.*, 1957). The conventions (Brown, 1957*a*), (Brown, 1957*b*) should be used where more than one paper by the same author(s) has appeared in one year. Volume number should be indicated in the typescript thus: **35**.

Footnotes should be avoided whenever possible. Essential footnotes should be indicated by superscript figures in the text and collected on a single page placed at the end of the manuscript.

Customary abbreviations will be used; authors may refer to *Chemical Abstracts*, to the *Biochemical Journal*, **66**, 8 (1957), and to *Notes on the preparation of papers to be communicated to the Royal Society* (1951). Certain non-standard abbreviations of chemical substances are convenient, and those listed in the *Journal of Biological Chemistry* may be used without further definition (e.g. DNA, ATP). Any other abbreviations of this kind should be used sparingly, and must be defined in a footnote at the point in each manuscript where the first such abbreviation occurs.

8. *Illustrations.* It is often convenient to make a *drawing* two or three times larger than it will

appear in the Journal, but very large drawings should be avoided and it will be helpful if drawings and illustrations are submitted on quarto (or 8½ by 11 inch) sheets. Drawings should be made in Indian ink on tracing linen, Bristol board, or faintly blue-lined graph paper; the originals should always be submitted with the manuscript, since photo-prints of drawings often cannot be reproduced satisfactorily. Explanations should, as far as possible, be placed in the legend; the drawing itself should contain a minimum of lettering, and this should be inserted lightly in *blue pencil*, in lower case except for proper names, when a capital should be used. It should be remembered that drawings will be reduced to a size not exceeding 8 by 5 inches, and that the final thickness of the lines should be 0·25 to 0·3 mm. If a curve is given merely for illustrative purposes no cross-lines are needed, but the axes should be graduated at intervals, and the diagram should be boxed in. Where possible, related diagrams should be grouped to form a single figure, and should be prepared uniformly and *on the same scale*. Where appropriate and possible a scale should be included in the illustration itself; the magnification may be noted in the legend and ajdusted after reduction by the blockmaker.

Whenever possible *photographs* should be supplied the same size as they are to appear in the Journal. The page area available for a plate is 5 by 7 inches or, at the most, 6 by 8 inches.

Line drawings will be referred to as Figure 1, Figure 2, etc., and half-tone blocks as Plate I, Plate II, etc. The name(s) of the author(s) and the number should be written on all illustrations, together with the indication "Top" if necessary. Besides the original illustrations *one* duplicate set must accompany the second copy of the manuscript; these may be photo-prints, and need not be of the same quality as the originals but must be clear and legible. If *oversize* original drawings are submitted (bigger than 8½ by 11 inches) they must be accompanied by *two* sets of small photo-prints.

9. *Reprints*. Fifty reprints of each paper will be supplied free of charge; additional copies may be purchased.
